Def Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Sep 21, 2002 this sequence version replaced gi:21738464.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequening reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the
sequence may extend beyond the ends of the clone and there may be
contigs that consist entirely of whole genome shotgun sequence
reads. Both and sequences and whole genome shotgun sequence
reads. Both and sequence and whole genome shotgun sequence
only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Submitted (05-MAR-2002) Human Genome Sequencing Center, Departmer of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA 3 (bases 1 to 241607)

* NOTE: This is a "working draft' sequence. It currently

* consists of 2 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

The proteins are identified by selecting a bait protein from a known adipocyte marker and then performing a yeast 2-hybrid selection to isolate prey proteins encoded by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New complex between two interacting proteins in adipocyte cells, useful for identifying selected interacting domains that modulate protein interactions, or for preventing or treating metabolic disorders such as obesity or diabetes
                                                                                                                                                                                               The present invention relates to a recombinant DNA construct of a plant (Arabidopsis thaliana) centromere. The constructs are useful for producing stably inherited michrosomes which can serve as vectors for the construction of transgenic plant and animal cells expressing selected proteins such as hormones, enzymes, interleukins, clotting factors, cytokines, antibodies, and growth factors.
                                                                                                        Recombinant DNA construct comprising a plant centromere, useful for producing stably inherited michrosomes which can serve as vectors for the construction of transgenic plant and animal cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, ss. gene, prey, adipocyte; SID; selected interacting domain; anorectic, antidiabetic; protein protein interaction; diabetes; yeast 2-hybrid assay; metabolic disorder; obesity.
                                                                                                                                                                                                                                                                                                              Sequence 67087 BP; 20469 A; 12665 C; 12858 G; 20613 T; 482 other;

TETM) (selected interacting domains) proceins. Also included are a polymuclectide encoding a polypeptide in the adipocyte cells, a recombinant host cell expressing at least one of the interacting polymuclectide encoding a polypeptide in the adipocyte cells, a cells, a SID (RTM)) polypeptide comprising any of the 738 mino acid sequences given in the specification (including its fragment or variant), a SID (RTM) polymuclectide comprising any of the 738 mucleotide sequences given in the specification (including its fragment or variant), a comprising the SID (RTM) polymuclectide, a recombinant host cell comprising the vector, a protein chip comprising the polypeptides and a record comprising all or part of the data, listed in the specification. The complex, polypeptides, polymuclectides and compounds are useful for preventing or treating metabolic disorders such as obesity or diabetes. The polymuclectides are useful as probes or primers. The complex is particularly useful for identifying selected interacting domains (SID (RTM)) for screening the therapeutic effect. The present
members of an adipocyte cDNA library. The proteins are designated SID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    sequence encodes a SID (prey) protein of the invention.

New immunogenic polynucleotides or polypeptides useful for diagnosing d treating cancer expressing CT or CP mRNA antigens, and immunology, microbiology, molecular biology and preventing and treating cancer recombinant DNA techniques virology, 111

Claim 1; SEQ ID 2794; 207pp; English.

ABQ17575 to ABQ20506 represent isolated polynucleotide (I) sequences, and ABP5446 to ABP54472 represent protein (II) sequences, from the present invention. (I) and (II) have cytostatic activity and can be used in gene

Human; glial cell-line derived neurotrophic factor receptor-alpha; GDNFR-alpha; glial cell line-derived neurotrophic factor; GDNF; neutrurin; signal transduction; dopaminergic nerve cell; Parkinson's disease; Alzheimer's disease; amyotrophic lateral sclerosis; neurological disorder; diabetes; glaucoma; sensory neuron; retinal ganglion cell degeneration; sensory neuron;
                                                                                                     N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a cDNA clone insert encoding a human glial cell-line derived neurotrophic factor receptor-alpha (GDNFR-alpha). The protein is capable of complexing with glial cell line-derived neurotrophic factor (GDNF) and mediating cell response to GDNF. GDNFR-alpha proteins are functionally characterised by the ability to bind GDNF and/or neurturin specifically, and to act
therapy and vaccines. (1), (11), antibodies and compositions from the
                present invention are useful for diagnosing, preventing and treating cancer, which expresses CT or CP mRNA antigens. They are useful for stimulating immune response. They can also be useful in virology, immunology, microbiology, molecular biology and recombinant DNA
                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated glial cell line-derived neurotrophic factor receptors used to develop products for treating e.g. improperly functioning dopaminergic nerve cells, Parkinson's disease, Alzheimer's disease or amyotrophic lateral sclerosis

as part of a molecular complex which mediates or enhances the signal transduction affects of GDNF and/or neutrurin. The proteins can be used for treating improperly functioning dopaminergic nerve cells.

Parkinson's disease, Alzheimer's disease or amyotrophic lateral sclerosis. They can also be used for treating neurological disorders associated with diabetes, glaucoma or other diseases and conditions involving retinal ganglion cell degeneration, sensory neuropathy caused by injury to, insuits to, or degeneration of, sensory neurops, pathological conditions, or disease or injury-related retinopathies.

The products can also be used for detection, diagnosis, drug screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated polynucleotide which is a polymorphic variant of small inducible cytokine subfamily A (Cys-Cys), member 26 (SCYA26) gene useful for expressing SCYA26 protein isoform used in drug screening

```
the frequency of the haplotype or haplotype pair in a reterence population, where a higher haplotype frequency in the trait population indicates the trait is associated with the haplotype or haplotype pair. SCYA26 and its corresponding DNA are used for studying the expression and function of SCYA26, for use in screening for candidate drugs to treat diseases related to SCYA26 activity, such as respiratory inflammatory diseases. The sequences are also useful for studying the effect of variation on the biological activity of SCYA26 as well as on the binding affinity of candidate drugs targeting SCYA26. This sequence represents a human SCYA26 modified DNA used in electronic searching of SCYA26
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, interleukin 15, IL15, haplotype; polymorphic site, PS,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to single nucleotide polymorphisms in the gene encoding human small inducible cytokine subfamily A (Cys-Cys) member 26 (SCYAZ6). A method for haplotyping the SCYAZ6 gene in an individual comprises identifying the nucleotide at one or more polymorphic sites and determining whether one of the copies of the gene is defined by one of the SCYAZ6 haplotypes given in the specification or whether both copies are defined by a haplotype pair. This method is useful in genotyping, whereby all possible haplotype pairs can be assigned to specific pair of the SCYAZ6 gene can be identified by comparing the frequency of the haplotype or haplotype pair in a population exhibiting the trait with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example 2; Page 78-79; 79pp; English.

the present expressing a curon tions there should a call-line derived neurotrophic factor receptor-alpha (GDNFR-alpha). The protein is capable of complexing with glial call-line derived neurotrophic factor (GDNFR-alpha) and mediating cell call line-derived neurotrophic factor (GDNFR-alpha) proteins are functionally characterised by the ability to bind GDNF and/or neurturin specifically, and to act as part of a molecular complex which mediates or enhances the signal transduction affects of GDNF and/or neurturin. The proteins can be used for treating improperly functioning dopaminergic nerve cells, Parkinson's disease, Alzheimer's disease or amyotrophic lateral sclosis. They can also be used for treating neurological disorders associated with diabetes, glaucoma or other diseases and conditions involving retinal ganglion cell degeneration, sensory neuropathy caused by injury to, insults to, or degeneration of, sensory neuropathies.

The products can also be used for detection, diagnosis, drug screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, glial cell line-derived neurotrophic factor, GDNF, receptor, treatment, dopaminergic nerve cell disorder, Parkinson's disease, Alzheimer's disease, amyotrophic lateral sclerosis; diabetes;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated glial cell line-derived neurotrophic factor receptors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        used to develop products for treating e.g. improperly functioning dopaminergic nerve cells, Parkinson's disease, Alzheimer's disease or amyotrophic lateral sclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human glial cell line-derived neurotrophic factor receptor cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a cDNA clone insert encoding a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              12.4%; Score 31; DB 20; Length 2157; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                XXXXXXXXXXXXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The internation relates to an isolated polymorphisms in the human interleukin 15 (ILIS) gene. The polymorphisms in the human interleukin 15 (ILIS) gene. The polymorphisms in the human interleukin 15 (ILIS) gene. The polymorphism cates referred to as PSI-13 to designate the order in which they are located in the gene. The polymorphisms in the ILIS gene is useful in screening candidate drugs to polymorphisms in the ILIS gene is useful in screening candidate drugs to treat diseases associated to ILIS activity, e.g. infections, human immunodeficiency virus or T cell laukaemia. The ILIS isogenes are especially useful for treating these diseases. The methods and haplotypes are useful in improving the efficiency of drug discovery and development processes, or for designing clinical trials of candidate drugs for treating the specific condition or disease. The transgenic animals are useful for studying expression of the ILIS isogenes in vivo, for in vivo screening and testing of drugs targeted against ILIS protein, and for cesting the efficacy of the therapeutic agents. The present sequence is thuman ILIS gene fragment allelic variant DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

neurotrophic factor (GDNF) receptor, which can be used to treat dopaminergic nerve cell disorders, e.g. Parkinson's and Alzheimer's disease and worthoric lateral electrosis, complications of diabetes and Huntington's disease and (optionally in combination with GDNF) and Huntington's disease and (optionally in combination with GDNF) and the man also be used to block unwanted GDNF activity, analyse GDNF related molecules and stabilise GDNF in pharmaceutical formulation. Receptor expressing cells, preferrably transfected as vivo, can be used similarly by implantation, and the use of the receptor CDNA in gene therapy is also contemplated. Probes based on the CDNA in gene therapy is also contemplated. Probes based on the CDNA in gene therapy is calls onotemplated. Probes based on the CDNA and benefit from GDNF therapy, and abnormalities in receptor would benefit from GDNF therapy, and abnormalities in receptor contemplates, oligonucleotides derived from the CDNA. Anti-receptor antibodies, oligonucleotides derived from the CDNA and animal condels that vortable can be used to immunossays for the receptor. The receptor can be used in immunosasays for the receptor. The receptor binds GDNF incompleted and with high affinity, acting as part of a complex that mediares/chalmers signal transduction by GDNF, i.e.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
Huntington's disease; glaucoma; retinal degeneration; hearing loss;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Glial cell line derived neurotrophic factor receptor - useful to treat dopaminergic nerve cell disorders, e.g. Parkinson's and Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ..

The present sequence encodes a human glial cell-line derived
neurotrophic factor receptor-alpha (GDNFR-alpha). The protein is
capable of complexing with glial cell line-derived neurotrophic
capable of complexing with glial cell line-derived neurotrophic
capable of complexing with glial cell line-derived neurotrophic
complexing are functionally characterised by the ability to bind
GDNF and/or neurturin specifically, and to act as part of
molecular complex which mediates or enhances the signal transduction
affects of GDNF and/or neurturin. The proteins can be used for treating
improperly functioning dopaminergic nerve cells, Parkinson's disease,
alzeimer's disease or amycrophic lateral scherosis. They can
also be used for treating neurological disorders associated with
diabetes, glaucoma or other diseases and conditions involving retinal
ganglion cell degeneration, sensory neuropathy caused by injury to,
insults to, or degeneration of, sensory neurons, pathological conditions,
or disease or injury-related retinopathies. The products can also be used
for detection, diagnosis, drug screening and gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

```
human gilal cell-line derived neurotrophic factor receptor-alpha (GDNFR-alpha). The protein is capable of complexing with gilal cell-line-derived neurotrophic factor factor receptor-alpha cell line-derived neurotrophic factor (GDNF) and mediating cell cell line-derived neurotrophic factor (GDNF) and mediating cell response to GDNF. alpha proteins are functionally characterised by the ability to bind GDNF and/or neurturin specifically, and to act as part of a molecular complex which mediates or enhances the signal transduction affects of GDNF and/or neurturin. The proteins can be used for traating improperly functioning dopaminergic nerve cells, parkinson's disease, Alzheimer's disease or amyotrophic lateral sclerosis. They can also be used for treating neurological disorders involving retinal ganglion cell degeneration, sensory neuropathy caused by injury to, insults to, or degeneration of, sensory neuropathy caused by injury to, insults to, or degeneration of, sensory neuropathy caused conditions can also be used for detection, diagnosis, drug screening and gene therapy.
                                                                                                                                                      Human; glial cell-line derived neurotrophic factor receptor-alpha; GDNFR-alpha; glial cell line-derived neurotrophic factor; GDNF; neurturin; signal transduction; dopaminergic nerve cell; Parkinson's disease; Alzheimer's disease; amyotrophic lateral sclerosis; neurological disorder; diabetes; glaucoma; sensory neuron; retinal ganglion cell degeneration; sensory neuron;
                                                                                                                     Glial cell-line derived neurotrophic factor receptor-alpha cDNA clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated glial cell line-derived neurotrophic factor receptors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           used to develop products for treating e.g. improperly functioning dopaminergic nerve cells, Parkinson's disease, Alzheimer's disease

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for restore normal activity of (II) or to treat disease states involving continuity of (II) or to treat disease states involving continuity of (II) or to treat disease states involving continuity of (II) or to treat disease states involving an early peptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in disponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AASA4197-AASA454 represent novel human configuration, but was obtained in electronic format directly from WIPO are interpretation, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Computer readable medium; vaccine; S.aureus infection; immunodetection; cellulitis; eyelid infection; food poisoning; osteomyelitis; therapy; skin infection; surgical wound infection; scalded skin syndrome; toxic shock syndrome; ds.
                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polynuclectide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        12.0%; Score 30; DB 23; Length 369; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S, aureus infection. The polypeptides can also be used in a kit for the immunodetection of S aureus in a sample. S aureus is implicated in numerous human diseases, including cellulities, eyelid infections, food poisoning, osteomyelitie, skin and surgical wound infections, acaded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used
                    "these bases represent a line of missing text in the sequence listing in the specification. They are include maintain the rucheotide numbering given in the specification for this DNA sequence."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the S.aureus DNA sequences contained on the computer readable medium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Staphylococcus aureus.

```
This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S. aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a kit for the immundetection of S. aureus in a sample. S. aureus is implicated in numerous human diseases, including cellulitis, evelid infections, food poisoning, osteowyelitis, skin and surgical wound infections, calded skin syndrome, tot. Organisms transformed with the DNA sequences can be used for the importance of the polypeptides. The mew DNA sequences (and their fragments) are useful as primers or probes for isolating conditing of the S. aureus DNA sequences contained on the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (RAM), or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is amplicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences can the transformed with the DNA sequences can be used and their fragments) are useful as primers or probes for isolating can define any of the S.aureus DNA sequences contained on the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                           /tag= a //tag= are included to maintain the nucleotide numbering given in the specification for this DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents one of 5191 Staphylococcus aureus DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Computer readable medium; vaccine; S.aureus infection; immunodetection; cellulitis; eyelid infection; food poisoning; osteomyelitis; therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S. aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antiqens have been identified and these polypeptides can be used in a kit for the immunodetection of S. aureus in a sample. S. aureus in a kit for the immunodetection of S. aureus in a sample. S. aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, syndrome, etc. Organisms transformed with the DNA sequences can be used for the transmont production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probee for isolating conversed.
                                                                                                                                                                                                                                                                                                  /note = "these bases represent a line of missing text in the sequence listing in the specification. They are included to maintain the nucleotide numbering given in the specification for this DNA sequence"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Polynucleotide(s) and proteins derived from Staphylococcus aureus stored on computer readable medium and used in the production of anti-S.aureus vaccines

Sequence 24, Application US/08444644

Patent No. 6015555

GENERAL INFORMATION:
TITLE OF INVENTION: TRANSFERIN RECEPTOR SPECIFIC
TITLE OF INVENTION: ANTIBODY-NEUROPHARMACEUTICAL OR DIAGNOSTIC AGENT
TITLE OF INVENTION: CONJUGATES
NUMBER OF SEQUENCES: 46
CORRESPONDENCE ADDRESS:
ADDRESSEE: Hamilton, Brook, Smith & Reynolds, P.C.
STREET: Two Militia Drive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     11.6%; Score 29; DB 3; Length 1045; 100.0%; Pred. No. 5.1e-06; tive 0; Mismatches 0; Indels
                                                                                                                                                                                        TYPE: DNA
ORGANISM: Rattus norvegicus
FEATURE:
NAME/KEY: unsure
LOCATION: (871)... (899)
OTHER INFORMATION: a or g or c or t, unknown, or other
FEATURE:
            TITLE OF INVENTION: MOLECULES EXPRESSED IN HIPPOCAMPUS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ZIP: 02173

Sequence 3, Application US/09804471A
Patent No. 6479269
GENERAL INFORMATION:
APPLICANT: WEBSIER, Marion et al
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
TITLE OF INVENTION: THEREOF
FILE REPERBNCE: CLOO1164
CURRENT PILING DATE: 2001-03-13
NUMBER OF SOLING AMERICATION WINDOWS Version 4.0
SOFTWARE: FastseQ for Windows Version 4.0
SEQ ID NO3:
                                                                                                                                                                                                                                                                                                                                                                                                             0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            11.6%; Score 29; DB 4; Length 174493; 100.0%; Pred. TITLE Public Soybean EST Project JOURNAL Unpublished COMMENT Conteact: Shoemaker R/Public Soybean EST Project Conteact: Shoemaker R/Public Soybean EST Project Public Soybean EST Project Washington University School of Medicine 4444 Forest Park Parkway, Box 8501, St. Louis, MO 63108, USA Tel: 314 286 1810 Email: esf@wartson.wustl.edu Email: esf@wartson.wustl.edu This clone is available through: ResGen, Invitrogen Corp. 2130 South Memorial Parkway Huntsville, AL 35801 For further information call: (800)-533-4336 or conteact: ccu@resgen.com web site: Www.resgen.com Seq primer: 40RP from Gibco	FEATURES Location/Qualifiers Source 218	/note="Vector: pBluescript II SK+; Site_1: ECORI; Site_2: Xhol; The mRNA was isolated from roots of 8 day old 'Bragg' supernodulating mutant NTS382 seedlings that were infected with Bradyhizobium japonicum, strain USDA 110, 72 hours prior to harvest. Dr. Gary Stacey generously donated the tissue. The roots were flash-frozen in liquid nitrogen. Stratagene's WODA Synthesis Xit (catalog number 200401) was used to synthesize the cDNA. First-strand synthesis was performed with 5-methyl dCTP, hence the ligated cDNA was hemimethylated. A modification of Stratagene's first-strand synthesis primer was used. An 'anchor' nucleotide (V=A, C, or G) was added to the 3' end	of the primer (GAGAGAGAGAGAGAGAGAGAGAGACATAGTTCGAG(TT) 80) anchor the primer at the 5' end of the poly (A) tract. After second-strand synthesis, the CDNA ends were filled in with cloned Pfu DNA, ligated to EcoRI adapters and subsequently phosphorylated. The CDNA was then precipitated and redissolved in sterile, RNase., DNase-free water. The XhoI site within the first- strand synthesis primer was then restricted by digestion with XhoI from Promega (40U/ul); all XhoI sitees in the CDNA would be protected by their hemimethylated status. The CDNA constructs were size-fractionated with a 500bp cutoff, using Sephaerry S-500 High Resolution (Pharmacia Riocech) in a 2-mm diameter column and a hed volume of	approximately in. The column eluent was precipitated, redissolved, and ligated into Straagene's pBluescript II XR Predigeted vector (pBluescript II SK(+) vector that has been digested with ECORI and Xhol, and phosphorylated by Stratagene). This library was constructed in the laboratory of Dr. Paul Keim and Dr. Virginia H. Coryell at Northern Arizona University." /roce="Weetor: pBluescript II SK+; Site 1: ECORI; Site 2:
Xhol; The cDNA library was constructed from mRNA isolated
from unexpanded leaves and the shoot tips of 2 week old
seedling from the cultivar Williams. The 2 week old
seedlings were salt stressed in a solution of 500mM Nacl
for 3 days prior to harvesting. Complementary DNA was
synthesized from mRNA using a primer consisting of a
poly(dT) sequence with A Xhol restriction site. ECORI
adapters were ligated to the blunt-ended cDNA fragments
followed by Xhol digestion. The cDNA fragments were
directionally cloned into the ECORI-Xhol restriction site
of the pBluescript vector. The ligated cDNA fragments were
transformed into DH10B host cells (GbCoBRL). This library

Xhol; The Harosoy NIL was constructed and seed was
provided by Dr. J. Specht, University of Nebraska
(Shoemaker and Specht, 1995). The cDNA library was
constructed from mRNA isolated from whole seedlings of I
week old greenhouse grown plants. Complementary DNA was
synthesized from mRNA using a primer consisting of a
poly(dT) sequence with a Xhol restriction site and a 3'
anchor. EcoRI adapters were ligated to the blunt-ended
CDNA fragments followed by Xhol digetion. The CDNA
fragments were directionally cloned into the EcoRI-Xhol
restriction site of the pBluescript vector. The ligated
CDNA fragments were transformed into DH10B host cells

High quality sequence stop: 421.
a primer consisting of a poly(dT) sequence with a Xhol restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The CDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DH10B host cells (GibcoBRL). This library was constructed in the laboratory of Dr. Randy Shoemaker."

seedlings were salt stressed in a solution of 500mM NaCl for 3 days prior to harvesting. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a Xhol restriction site. EcoR: adapters were ligated to the biunt-ended cDNA fragments followed by Xhol digestion. The CDNA fragments were directionally cloned into the EcoRI-Xhol restriction site of the palbuscript vector. The ligated cDNA fragments were transformed into DHIOB host cells (GibcoBRL) This library was constructed in the laboratory of Dr. Randy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Conser 1 to 578)

/note="Vector: pBluescript II SK+; Site 1: EcoRI; Site 2:
XhoI; The CDNA library was constructed from mRNA isolated
from drought stressed leaf tissue of the cultivar Williams
from drought stressed leaf tissue of the cultivar Williams
82. The month old greenhouse grown plants were deprived of
water for 3 days prior to harvesting the stressed leaf
tissue. Complementary DNA was synthesized from mRNA using
a primer consisting of a poly(dT) sequence with a XhoI
restriction site. EcoRI adapters were ligated to the
blunt-ended CDNA fragments followed by XhoI digestion. The
CDNA fragments were directionally cloned into the
EcoRI-XhoI restriction site of the pBluescript vector. The
ligated CDNA fragments were transformed into bH10B host
cells (GlocoBRL). This library was constructed in the
laboratory of Dr. Randy Shoemaker."

//done degenerating coryledons of 2 week old seedlings from from degenerating coryledons of 2 week old seedlings from Fl468916. Complementary DNA was synthesized from RNA using a primer consisting of a poly(dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion.
The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DH10B host cells (GbcoBRL). This library was constructed in the laboratory of Dr. Randy Shoemaker."

XhoI; The cDNA library was constructed from mRNA isolated from mture flowers of field grown plants for the cultivar Raiden. Complementary DNA was synthesized from mRNA using a primer consisting of a poly (dT) sequence with a XhoI restraction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The

The column eluent was precipitated, redissolved, and ligated into Stratagene's pBluescript II XR Predigested vector (PBLuescript II SK P. vector that has been digested with EcoRI and XhoI, and phosphorylated by Stratagene). This library was constructed in the laboratory of Dr. Paul Keim and Dr. Virginia H. Coryell at Northern Arizona University."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eukaryota, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta,

/note="Wector: pBluescript II SK+; Site 1: EcoRI; Site 2:
KhoI; The cDNA library was constructed from mRNA isolated
from drought stressed leaf tissue of the cultivar Williams
82. The month old greenhouse grown plants were deprived of
water for 3 days prior to harvesting the stressed leaf
tissue. Complementary DNA was synthesized from mRNA using
a primer consisting of a poly(dT) sequence with a XhoI
restriction site. EcoRI adapters were ligated to the
blunt-ended cDNA fragments followed by XhoI digestion. The
CDNA fragments were directionally cloned into the
EcoRT-XhoI restriction site of the pBluescript vector. The
ligated cDNA fragments were transformed into the
colls (GibcoBRL). This library was constructed in the

//note="Vector: pBluescript II SK+; Site I: EcoRI; Site 2:
XhoI; The CDNA library was constructed from mRNA isolated
from unexpanded leaves and the shoot tips of 2 week old
seedling from the cultivar williams. The 2 week old
seedling from the cultivar williams. The 2 week old
seedling swere salt stressed in a solution of 500mM Nacl
for 3 days prior to harvesting Complementary DNA was
synthesized from mRNA using a primer consisting of a
poly(dT) sequence with a XhoI restriction site. EcoRI
adapters were ligated to the blunt-ended cDNA fragments
followed by XhoI adjestion. The CDNA fragments were
directionally cloned into the EcoRI: XhoI restriction site
of the pBluescript vector. The ligated cDNA fragments
was constructed in the laboratory of Dr. Randy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Email: est@watson wustl.edu
